

MIGRATION SERVICE OVERVIEW

CoSo Cloud offers a deployment migration service for Adobe Connect customers. CoSo will move your Adobe Connect installation from its current environment, whether installed on premise, or in the cloud in a multi-tenant hosted, or single-tenant managed service implementation. We migrate your entire deployment, intact and with efficiency and diligence, using our proprietary migration software and services. Our experience and history of success with Adobe Connect migrations to CoSo Cloud managed operations centers ensure consistency and data retention, executed rapidly for maximum availability of your Adobe Connect system.

WHAT IS MIGRATED?

 **Content:** all content loaded to the Adobe Connect server, whether loaded in the Content library or directly into meeting rooms is migrated. Content includes any resources defined as Courses and/or Curriculums

 **Recordings:** Both MP4 and 'native' Connect recordings, regardless of where they are stored and accessed on the server, are migrated

 **Room Templates:** Any default or custom-built templates will be migrated and available in the new implementation, and their existing room associations will be intact.

 **User Data and Permissions:** user accounts, profile information, user activities, and permissions to resources on the Adobe Connect account are all migrated

 **Reports:** all report data available on Connect remains intact and available through the same reports accessed prior to migration. No historic data is removed.

WHAT CHANGES OR IS NOT MIGRATED?

 **Account URL:** Because your server is deployed in a new place, to server URL will necessarily change. Our proprietary service makes this change as smooth as possible, because all URLs to meetings and content are updated to match the new server URL. Your users will simply need to update their bookmarks to any frequently used meeting rooms or other Adobe Connect resources.

 **CUSTOM MIGRATION OPTIONS:** CoSo's service allows for consultation and custom migration where possible. If legacy user or content cleanup is desired, for example, the team at CoSo will help scope and implement these or other differentiated changes during migration.

WHAT SERVICES ARE INCLUDED IN MIGRATION?

Throughout the migration process, CoSo will provide a dedicated project manager and our data center and Adobe Connect architecture teams. Additionally, there is typically involvement from Adobe's technical team, your Adobe Connect partner, and any third-party integrators you may need to involve to ensure a smooth migration. Throughout the process, weekly meetings structured and facilitated by a CoSo project manager, as well as any necessary check-in meetings occur. Every CoSo Managed Service customer has a dedicated Customer Success Manager (CSM) who is there to assist throughout the migration process, as well as act as your partner in success with Adobe Connect after the migration for the duration of your future with CoSo.

HOW LONG DOES A MIGRATION TAKE?

The typical migration process takes about 4-8 weeks, including planning, data analysis, build and testing. The actual final cut-over to the new environment is typically under 6 hours.

COMMON QUESTIONS

How long will Adobe Connect be down during the transition?

We mitigate downtime by migrating most of the data in advance during the build phase and perform the migration over a weekend to have the least amount of business impact. The time depends on your account size and data stored but typically takes under 4 hours.

How secure is the transfer?

Transfer between the client and the server is done using an SSL tunnel that is secured by client-server SSL certificates. We are happy to provide further technical details as needed.

I am working with another Adobe Connect Value Added Reseller as a primary contact. How will the migration work?

CoSo works very closely with many Adobe Connect VARs, providing our managed services to their customers. In addition to the resources listed above, we will work closely with your primary VAR partner to ensure a smooth transition.

How are telephony and Universal Voice handled?

CoSo has a long-standing relationship with many Adobe Connect's partner telephony providers including MeetingOne, PGI, Intercall, West, and Arkadin. Any telephony adaptor that Adobe Connect currently supports,

we will support as well. Will work with you to integrate any Universal Voice providers.

How are 3rd party integrations handled?

CoSo specializes in integrating 3rd party applications, SSO, APIs and LMSs with Adobe Connect. CoSo recently acquired eSyncTraining, a developer of Adobe Connect applications. We will work with you to bring over any of your integrations into your new environment.

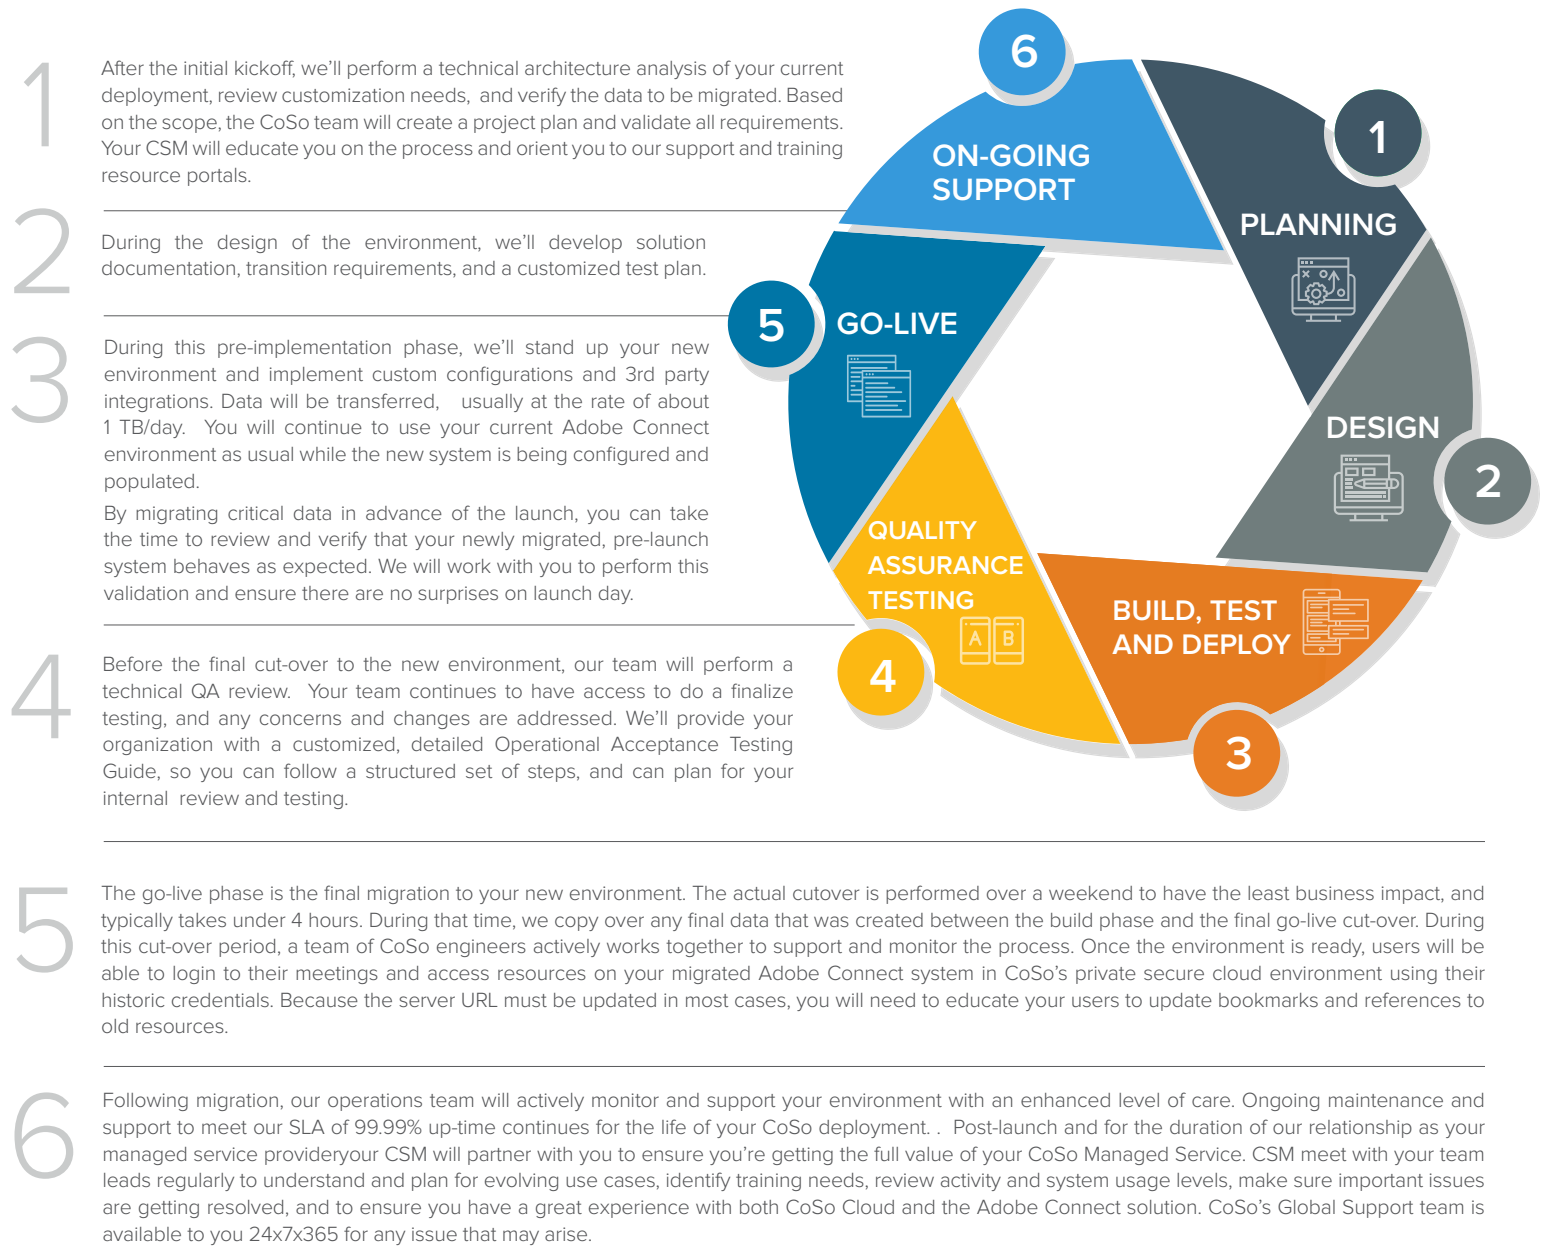

Do I have to change my URL?

Yes, as part of the migration we will move your environment to a new domain; however, Adobe will implement a URL redirect. Please note, that redirect may not universally apply to all applications and add-ons, and we recommend you inform your users to modify bookmarks and references to resources and meetings on Adobe Connect

What if I don't want to bring over all my existing data to the new environment?

User management and content management cleanup is a common request during migrations. We can work with you and Adobe to manage data that gets ported over.

WHAT STEPS ARE INVOLVED IN THE MIGRATION PROCESS?

ABOUT COSO CLOUD

CoSo Cloud is a global company based in Oakland, CA with office locations in San Diego, CA and the Washington DC metro area. CoSo provides a secure private cloud platform with customized managed and professional services to distributed businesses and government agencies engaged in high-consequence virtual training and communication of mission-critical information in real-time. CoSo also offers software applications and professional services to customize the virtual engagement environment for customer specific use cases when requirements demand more than a virtual meeting. CoSo is an authorized Adobe Connect® Gold partner and a leading eLearning services provider.
